

# CHECKLIST FOR DIY APP BUILDER CUSTOMERS

- Begin your DIY App Builder free trial.
- Build your app. Make sure you have filled in all of the content, added pages, etc. The app will need to have the branding section completed, an App icon, App name, and App loading screens.
- Create your apple and google play developer accounts. Step by step guides on how to complete these can be found on our website under the INFO tab.
- Make sure you have created your Firebase certificates. [Click here to complete them.](#)
- Once you complete those steps, the next step is to fill out the Publishing Information for your app within the Control Panel and send it off to our publishing team so that they can submit it to the app stores for you. This step by step guide can be found on our website under the INFO tab as well. Complete the information and then select publish to trigger the 2fa code (two factor authentication) that the you will need to enter into the 2fa prompt after publish is selected. This will start the process, it will take two days to be built and submitted to the stores for review.

NOTE: Apple takes 1-2 weeks to publish new apps and Google has been seeing delays accounting for about a week-long review time.
